7. Reverse Integer

Easy

2882

4518

Add to List

Share

Given a 32-bit signed integer, reverse digits of an integer.

Example 1:

Input: 123**Output:** 321

Example 2:

Input: -123**Output:** -321

Example 3:

Input: 120**Output:** 21

Note:

Assume we are dealing with an environment which could only store integers within the 32-bit signed integer range: $[-2^{31}, 2^{31} - 1]$. For the purpose of this problem, assume that your function returns 0 when the reversed integer overflows.
